

Farrowing Crate

The Vissing Agro farrowing crate is designed to give the sow and the piglets enough space during the whole lactating period.

The wings with the bended fingers are designed to give complete support for the sows back and give the piglets a good access to the sow.

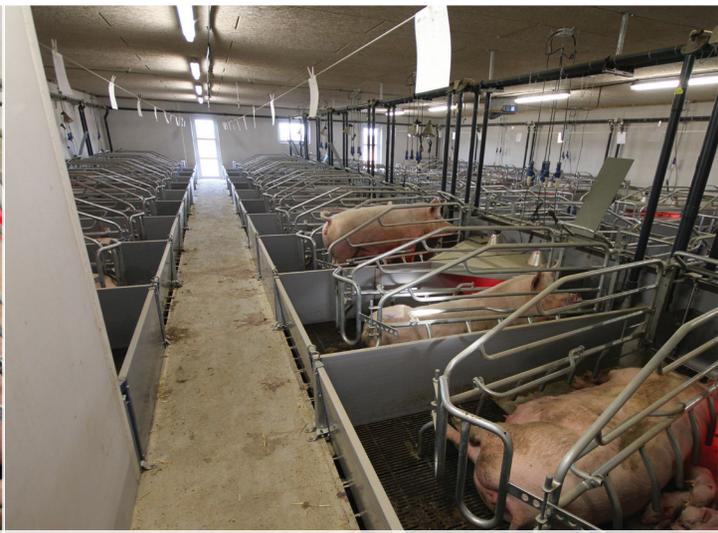

The dividers are made from light plastic board profiles and together with the special brackets for the rear plate it's easy to protect the cleaning gap during the birth period.

The creep nest is protecting the piglets and is creating a good micro climate.

FARROWING CRATE

Farrowing crate with crush bar

Tiltable back gate closes opening for cleanout

Farrowing pen with cast iron

Front exit gate

Facts

- Length of the pen 8'2" - 9'2"
