

# Pig production

## Good light - good productivity

Leading advisors and veterinarians recommend **minimum 200 lux for the sows 17 hours a day**. RN Solutions System Light installed right above the sows secure that they receive the right amount of light.

## Flexible use and easy installation.

The System light can be used in all barn environments and associated areas. With the included mounting clips and the plug and play connections, installation is fast, easy and economical for the farmer or installation companies.

## Good economy.

With the System light you save at least **60% power** compared to traditional fluorescent light and they have a longer life span. The tube lights are of the highest quality and are designed to last in agricultural environment.

2 years warranty - life span of 50.000 hours.

Low power consumption, inexpensive installation and long life span, together secures good economy.
